

Commitment and Time Bound on Protecting Biodiversity

PT. Toba Pulp Lestari (TPL) is committed to protecting the biodiversity in our operation. Since 2019, TPL has carried out several activities to protect biodiversity areas in protected areas including HCV/HCS areas. In 2023, TPL has a target of achieving several activities such as providing natural seedlings for enrichment, natural and artificial succession activities, and planting animal feed plants and TPL strives to achieve beyond the targets. The target and achievements can be seen in the following time bound graph:

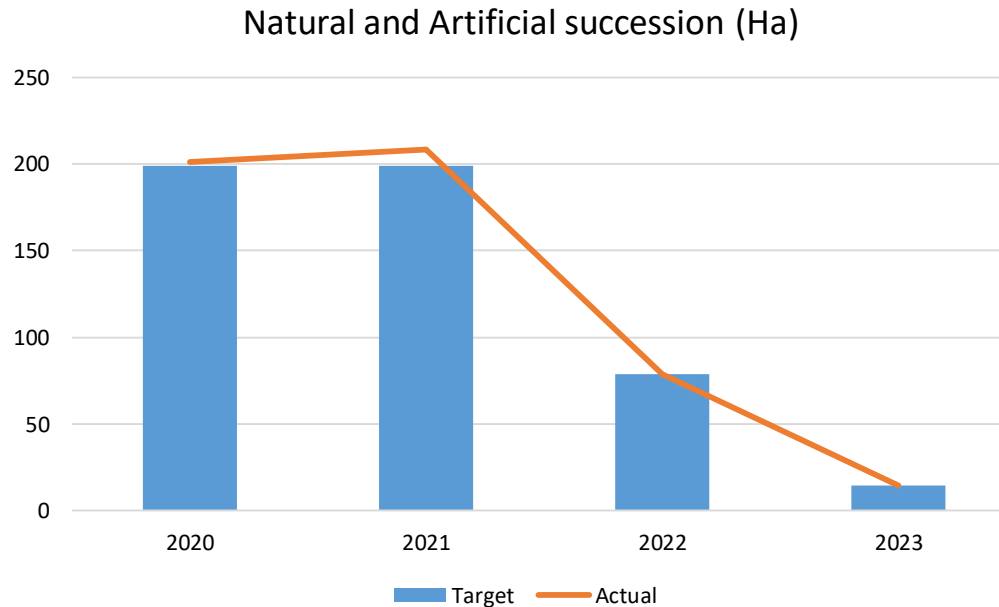

TPL has provided natural seeds from 2019 - 2023. For 2023, TPL targets to provide natural seeds for 150,000 plants. This target is bigger than the previous year because in 2023 maintenance will be carried out in protected areas. Monitoring is carried out to ensure the plants are in good condition.

Commitment and Time Bound on Protecting Biodiversity

2. Natural and Artificial succession (Ha)

In 2023, there is ±5 ha of area that needs to be enriched. This number is lower than the previous year's target due to the success of natural and artificial succession. To maintain this, TPL monitors all succession areas.

Commitment and Time Bound on Protecting Biodiversity

3. Planting the feed plant for wild animal (Tree)

In 2023, 855 animal food plants will be planted.
