

PT Toba Pulp Lestari's Forest Monitoring

PT Toba Pulp Lestari (TPL) has established procedures for monitoring forest security, timber logistics and other aspects. Monitoring is carried out by security personnel by checking each vehicle that enters and exits the security post portal at the entry points of TPL's concession. Further to the aforementioned, process, security officers also conduct forest security patrols that are scheduled every day and record the results of monitoring. Patrols are carried out in locations that include areas which have the risk of illegal logging, land claims, and fires following TPL's Forest Monitoring Mapping system.
